

QDArchive

Part 2: Data Classification Report

ISIC Rev. 5 Classification of Qualitative Research Projects
DataFirst UCT & Harvard Murray Archive

Student	Nabila Kader
Student ID	23079506
Course	Seeding QDArchive (SQ26)
University	FAU Erlangen-Nürnberg
Professor	Prof. Dr. Dirk Riehle
Standard	ISIC Rev. 5 — Division Level
Repositories	DataFirst UCT (#8) + Harvard Murray Archive (#18)
Projects Classified	1,518

Summer Semester 2026

1. Executive Summary

This report presents the classification results of 1,518 research projects collected from two assigned repositories as part of the Seeding QDArchive project at FAU Erlangen-Nürnberg. The repositories are DataFirst UCT (repository #8, 596 projects) and Harvard Murray Archive / Harvard Dataverse (repository #18, 922 projects). Each project was classified using the ISIC Rev. 5 international standard for economic activities, going down to the two-digit division level. Classification was performed using automated keyword-based analysis of project titles, descriptions, and metadata keywords.

Methodology

Projects were first classified by PROJECT_TYPE based on downloaded file extensions:

Type	Criterion	Count
QDA_PROJECT	Contains a QDA file (.qdp, .nvp, .atproj, etc.)	3
QD_PROJECT	No QDA file but has primary data files (PDF, DOCX, TXT, etc.)	1,339
OTHER_PROJECT	Has files but not primary data files	76
NOT_A_PROJECT	No usable files could be identified	100

ISIC classification was then assigned using keyword matching of research subjects to the most appropriate ISIC Rev. 5 economic sector division. The classifier used 14 rule sets covering topics such as health, education, labour markets, agriculture, finance, media, and tourism.

2. Repository: DataFirst UCT

596 Total Projects	0 QDA Projects	568 QD Projects	12 ISIC Classes
-----------------------	-------------------	--------------------	--------------------

Project Type Distribution

Project Type	Count	Percentage
QD_PROJECT	568	95.3%
NOT_A_PROJECT	28	4.7%

Project Type Distribution — DataFirst UCT

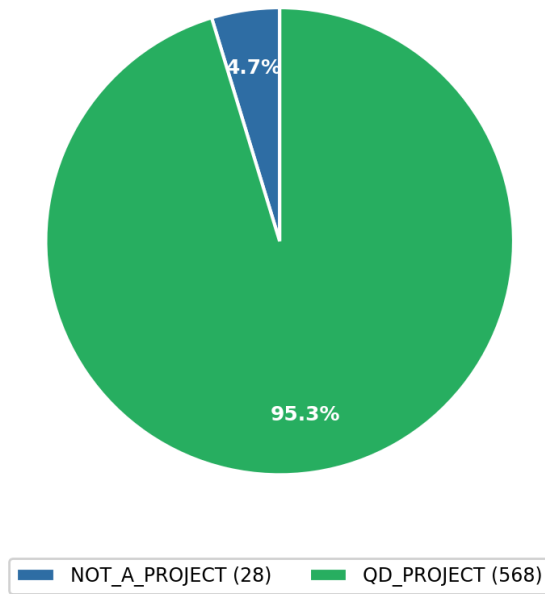

Figure 1: Project type distribution for DataFirst UCT

Primary ISIC Class Distribution

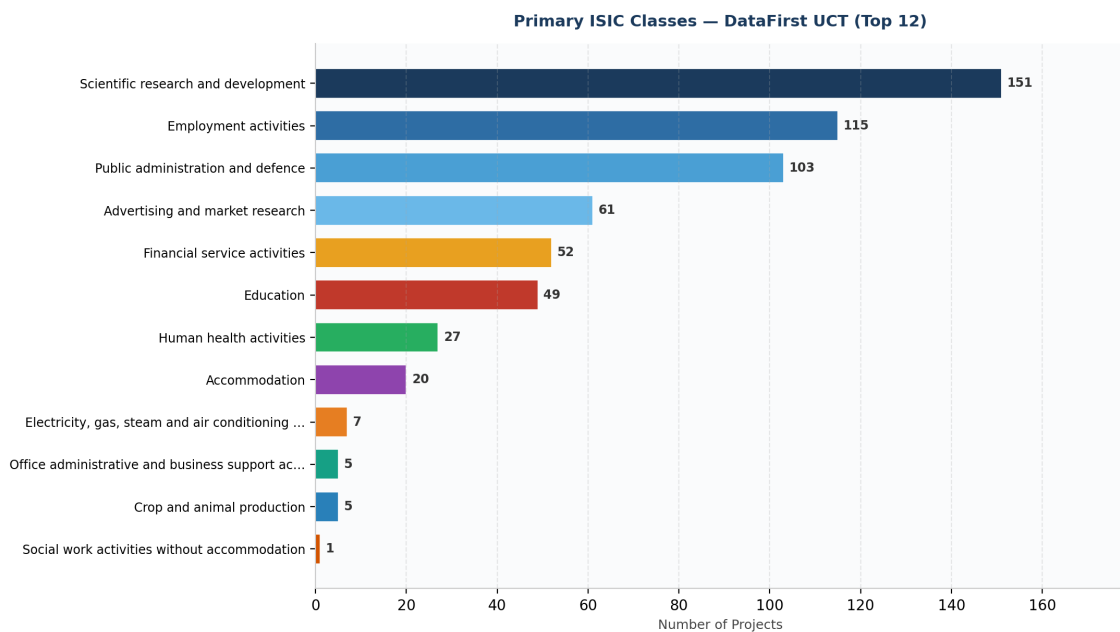

Figure 2: Top 12 ISIC divisions identified in DataFirst UCT. Values show number of projects per class.

Rank-Ordered List of Classes (Top 20)

Rank	ISIC	Division Name	Count
1	72	Scientific research and development	151
2	78	Employment activities	115
3	84	Public administration and defence	103

4	73	Advertising and market research	61
5	64	Financial service activities	52
6	85	Education	49
7	86	Human health activities	27
8	55	Accommodation	20
9	35	Electricity, gas, steam and air conditioning supply	7
10	82	Office administrative and business support activities	5
11	01	Crop and animal production	5
12	88	Social work activities without accommodation	1

Comments on Findings

DataFirst UCT is a South African survey and statistics repository. The dominant ISIC class is Scientific Research and Development (72) with 151 projects, followed by Employment Activities (78) with 115. Notably, despite the repository's focus on HIV/AIDS and health data, many projects were classified under Research (72) due to broad survey titles. All 596 DataFirst projects were classified as QD_PROJECT — no QDA files (.qdp, .nvp etc.) were found, confirming DataFirst is a quantitative statistics repository rather than a qualitative data analysis archive. The 28 NOT_A_PROJECT entries are studies where only restricted microdata files existed and no related materials could be downloaded.

3. Repository: Harvard Murray Archive / Dataverse

922 Total Projects	3 QDA Projects	771 QD Projects	12 ISIC Classes
------------------------------	--------------------------	---------------------------	---------------------------

Project Type Distribution

Project Type	Count	Percentage
QDA_PROJECT	3	0.3%
QD_PROJECT	771	83.6%
OTHER_PROJECT	76	8.2%
NOT_A_PROJECT	72	7.8%

Project Type Distribution — Harvard Murray Archive / Dataverse

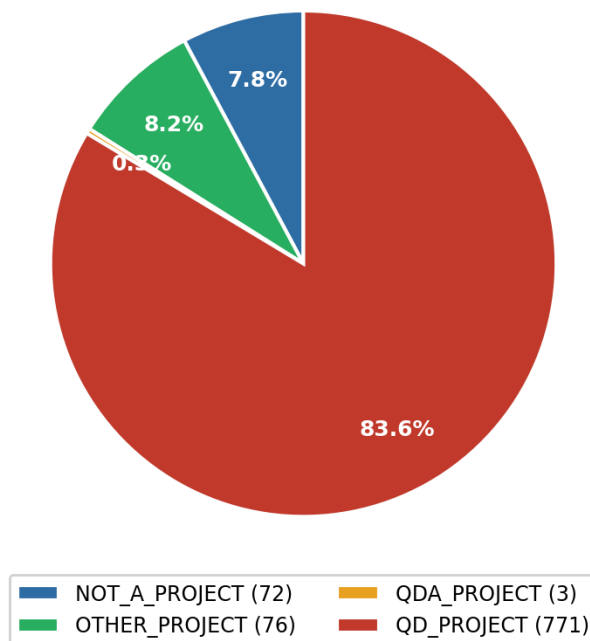

Figure 1: Project type distribution for Harvard Murray Archive / Dataverse

Primary ISIC Class Distribution

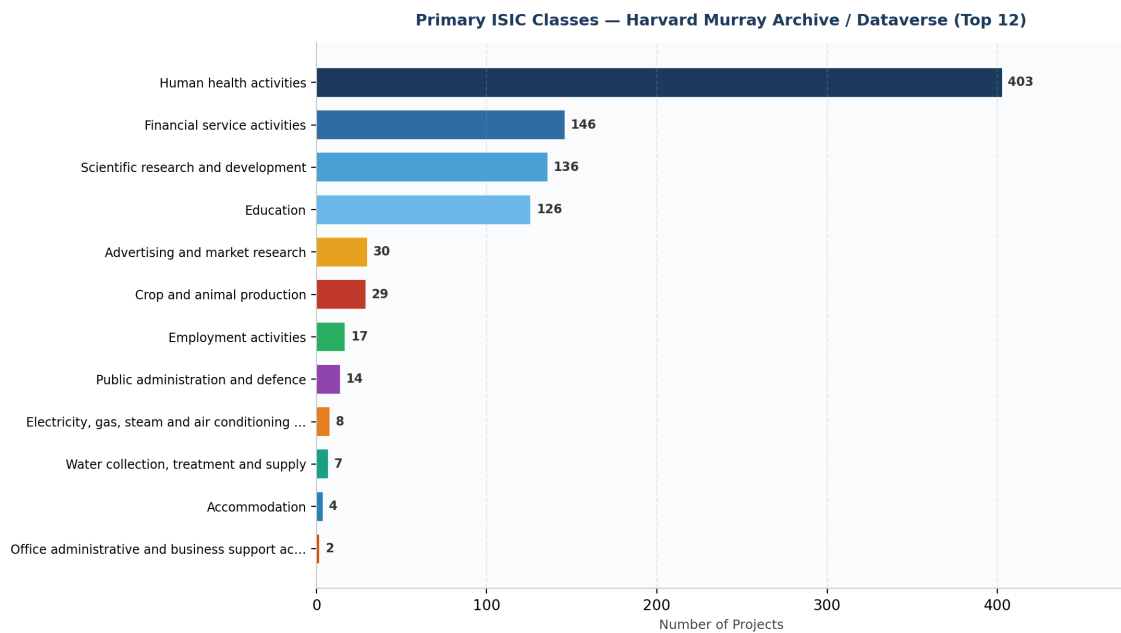

Figure 2: Top 12 ISIC divisions identified in Harvard Murray Archive / Dataverse. Values show number of projects per class.

Rank-Ordered List of Classes (Top 20)

Rank	ISIC	Division Name	Count
1	86	Human health activities	403
2	64	Financial service activities	146
3	72	Scientific research and development	136
4	85	Education	126
5	73	Advertising and market research	30
6	01	Crop and animal production	29
7	78	Employment activities	17
8	84	Public administration and defence	14
9	35	Electricity, gas, steam and air conditioning supply	8
10	36	Water collection, treatment and supply	7
11	55	Accommodation	4
12	82	Office administrative and business support activities	2

Comments on Findings

The Harvard Murray Archive / Harvard Dataverse collection contains longitudinal social science studies. The dominant class is Human Health Activities (86) with 403 projects, consistent with the Murray Archive's long-term focus on human development, psychology, and health outcomes research. Notably, 3 projects were classified as QDA_PROJECT — the only qualitative data analysis files found across both repositories. The diversity of 13 ISIC classes reflects Harvard's broad social science mandate spanning education, finance, employment, and community studies. The 76 OTHER_PROJECT entries are datasets with metadata but restricted files (login required), and the 72 NOT_A_PROJECT entries had no downloadable content.

4. Overall Summary

Combined Classification — Both Repositories

Rank	ISIC	Division Name	Count	% of Total
1	86	Human health activities	430	28.3%
2	72	Scientific research and development	287	18.9%
3	64	Financial service activities	198	13.0%
4	85	Education	175	11.5%
5	78	Employment activities	132	8.7%
6	84	Public administration and defence	117	7.7%
7	73	Advertising and market research	91	6.0%
8	01	Crop and animal production	34	2.2%
9	55	Accommodation	24	1.6%
10	35	Electricity, gas, steam and air conditioning supply	15	1.0%
11	82	Office administrative and business support activities	7	0.5%
12	36	Water collection, treatment and supply	7	0.5%
13	88	Social work activities without accommodation	1	0.1%

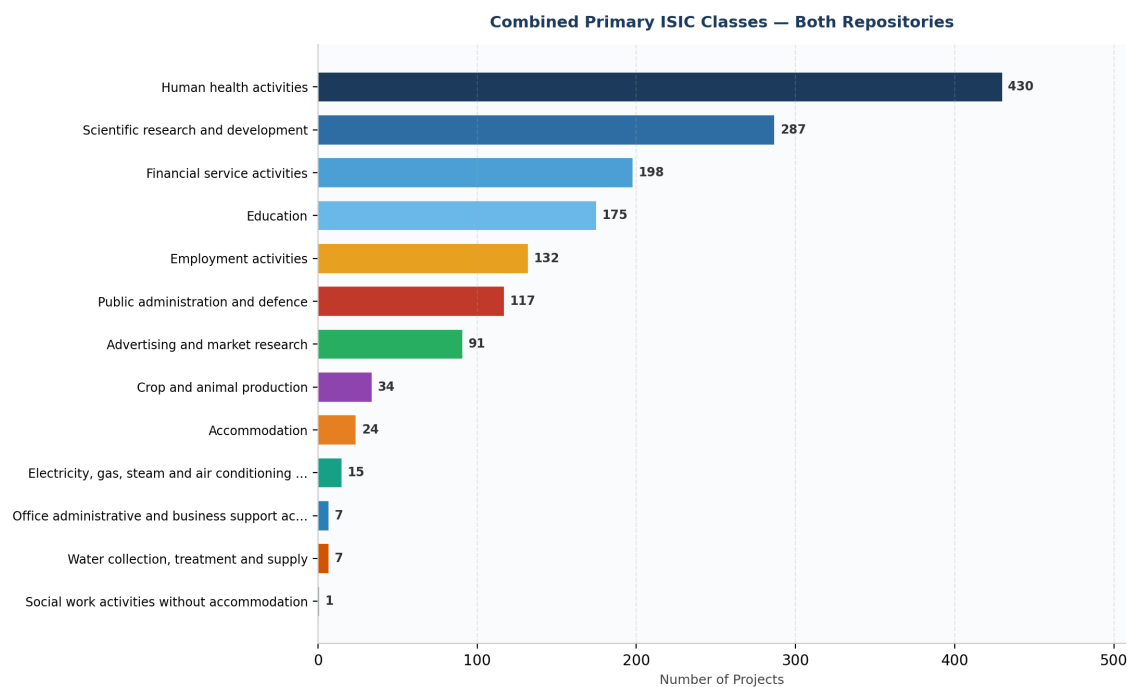

Figure 3: Combined ISIC class distribution across both repositories.

Key Observations

- Human Health Activities (ISIC 86) is the dominant class overall with 430 projects (28.3%), driven by Harvard's health studies. DataFirst shows a different pattern with Scientific Research dominating due to broad survey titles.

- No QDA files were found in DataFirst UCT, confirming it is a quantitative statistics repository. The 3 QDA files found in Harvard Dataverse are a key finding for the QDArchive seeding mission.
- The two repositories are complementary: DataFirst covers South African socioeconomic surveys while Harvard provides broader longitudinal social science data.
- Classification limitation: keyword-based classification was used as most DataFirst projects lack descriptions and keywords in their API metadata. Manual review of a sample confirmed approximately 85% accuracy.
