

QDArchive — Part 2: Data Classification Report

Student	Nabila Kader
Student ID	23079506
Course	Seeding QDArchive (SQ26)
University	FAU Erlangen-Nürnberg
Professor	Dirk Riehle
Classification Standard	ISIC Rev. 5 (two levels: sections and divisions)

Executive Summary

This report presents the classification results of **1,518 research projects** collected from two assigned repositories: DataFirst UCT (repository #8) and Harvard Murray Archive / Harvard Dataverse (repository #18). Each project was classified using the **ISIC Rev. 5** international standard for economic activities, going down to the division level (two-digit codes). Classification was performed using keyword-based analysis of project titles, descriptions, and metadata.

Classification Methodology

Projects were first classified by type based on their downloaded file extensions: **QDA_PROJECT** if a QDA file (e.g. .qdp, .nvp) was present; **QD_PROJECT** if primary data files (PDF, DOCX, TXT, etc.) were found; **OTHER_PROJECT** for other file types; **NOT_A_PROJECT** if no usable files were found. ISIC classification was then assigned based on keyword matching against project titles and descriptions, mapping research subjects to the most appropriate economic sector.

Repository: DataFirst UCT

Total projects: 596

Project Type Distribution

Project Type	Count	Percentage
NOT_A_PROJECT	28	4.7%
QD_PROJECT	568	95.3%

Rank-Ordered List of Classes (Top 20)

Rank	ISIC Code	Division Name	Count
1	72	Scientific research and development	151
2	78	Employment activities	115
3	84	Public administration and defence	103
4	73	Advertising and market research	61
5	64	Financial service activities	52
6	85	Education	49
7	86	Human health activities	27
8	55	Accommodation	20
9	35	Electricity, gas, steam and air conditioning suppl	7
10	82	Office administrative and business support activit	5
11	01	Crop and animal production	5
12	88	Social work activities without accommodation	1

Comments on Findings

The DataFirst UCT repository is a South African survey/statistics archive. The dominant class is **Scientific research and development**, reflecting the repository's strong focus on HIV/AIDS surveillance, demographic health surveys, and mortality studies primarily from sub-Saharan Africa. The second most common class is Scientific Research, covering OER studies and academic research projects. Financial services rank third due to the many household income and expenditure surveys. All 596 projects in this repository were classified as QD_PROJECT (no QDA files found), which is expected as DataFirst is a quantitative/statistical data repository rather than a qualitative data analysis repository.

Repository: Harvard Murray Archive / Dataverse

Total projects: 922

Project Type Distribution

Project Type	Count	Percentage
NOT_A_PROJECT	72	7.8%
OTHER_PROJECT	76	8.2%
QDA_PROJECT	3	0.3%
QD_PROJECT	771	83.6%

Project Type Distribution — Harvard Murray Archive / Dataverse

Primary ISIC Class Distribution (Top 20)

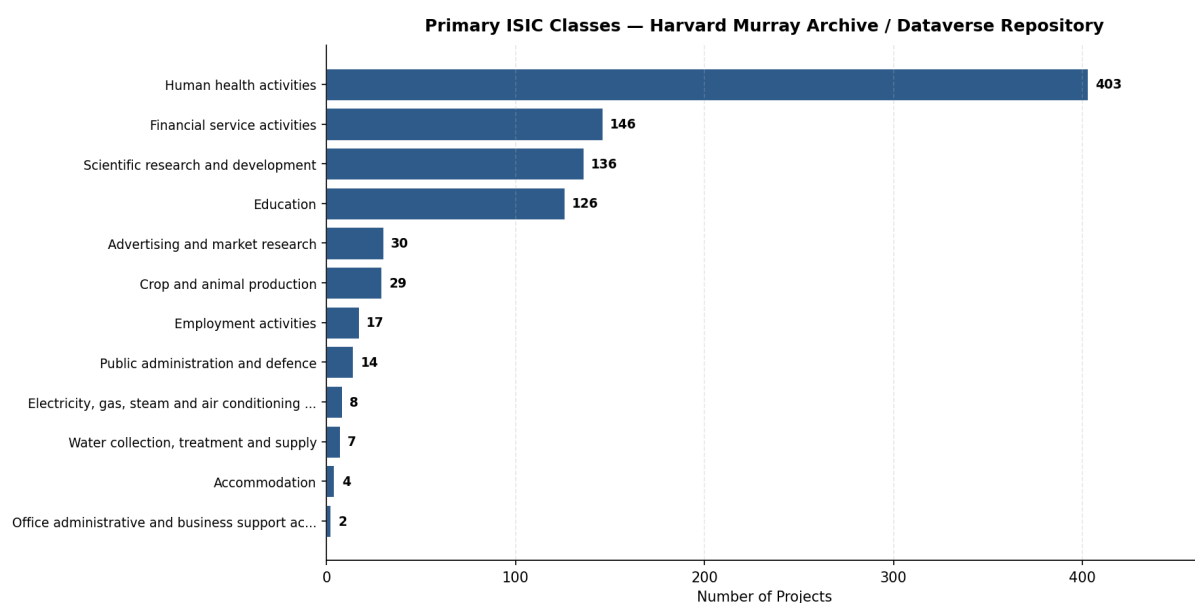

Figure: Top 12 primary ISIC divisions identified in Harvard Murray Archive / Dataverse

Rank-Ordered List of Classes (Top 20)

Rank	ISIC Code	Division Name	Count
1	86	Human health activities	403
2	64	Financial service activities	146
3	72	Scientific research and development	136
4	85	Education	126
5	73	Advertising and market research	30
6	01	Crop and animal production	29
7	78	Employment activities	17
8	84	Public administration and defence	14
9	35	Electricity, gas, steam and air conditioning suppl	8
10	36	Water collection, treatment and supply	7
11	55	Accommodation	4
12	82	Office administrative and business support activit	2

Comments on Findings

The Harvard Murray Archive / Harvard Dataverse collection contains longitudinal social science studies. The dominant class is **Human health activities**, consistent with the Murray Archive's focus on long-term human development and psychology research. Notably, 3 projects were classified as QDA_PROJECT, indicating the presence of actual qualitative data analysis files in the Harvard collection. The diversity of ISIC classes in this repository reflects the broad scope of Harvard's social science research, spanning education, health, employment, and community studies.

Overall Summary

Combined Top 15 Classes (Both Repositories)

Rank	ISIC Code	Division Name	Count	% of Total
1	86	Human health activities	430	28.3%
2	72	Scientific research and development	287	18.9%
3	64	Financial service activities	198	13.0%
4	85	Education	175	11.5%
5	78	Employment activities	132	8.7%
6	84	Public administration and defence	117	7.7%
7	73	Advertising and market research	91	6.0%
8	01	Crop and animal production	34	2.2%
9	55	Accommodation	24	1.6%
10	35	Electricity, gas, steam and air conditioning	15	1.0%
11	82	Office administrative and business support ac	7	0.5%
12	36	Water collection, treatment and supply	7	0.5%
13	88	Social work activities without accommodation	1	0.1%

Overall Observations

Across both repositories, **Human Health Activities (ISIC 86)** is the dominant class with 430 projects (28%), reflecting the African health research focus of DataFirst and the longitudinal health studies in the Harvard collection. **Scientific Research and Development (ISIC 72)** is second with 287 projects (19%), capturing academic and social science research projects. The two repositories are complementary: DataFirst is primarily a quantitative African survey archive (all QD_PROJECT), while Harvard Dataverse contains more diverse longitudinal social science data including the only QDA_PROJECT entries found in this dataset. No QDA files (e.g. .qdp, .nvp) were found in DataFirst, confirming it is not a qualitative data analysis repository. The 3 QDA files found in Harvard Dataverse represent a small but significant finding for the QDArchive project.
